New vitamin D receptor related (VDRR) polypeptides, useful for treating obesity, diabetes, anorexia and rheumatoid arthritis

```
The present sequence encodes a human vitamin D receptor related (VDRR) CC polypeptide. Human VDRR polypeptides and substances which affect VDRR CC signal transduction, can be used for treating metabolic, proliferative or inflammatory conditions. They can be used in the manufacture of a comedicament for treating the following conditions: obesity, diabetes, anorexia, lipoprotein defects, hyperlipidaemia, hypercholesterolaemia or hyperlipipoprotein and osteoporosis, rheumatoid arthritis, benign and malign tumours, hyperproliferative skin disorders or hyperthyroidism.

CN Nucleic acid vectors encoding for expression of a VDRR polypeptide can be used for treating metabolic, proliferative or inflammatory conditions, by introducing them into a mammal. The introduced nucleic acid is then capable of transforming a cell in vivo and then polypeptide is expressed. A substance affecting VDRR signal transduction, such as an agonist or can be used for the manufacture of a medicament for treating content of the manufacture of a medicament for treating content of the proliferative or inflammatory condition.

CN N.B. The specification specifically claims the VDRR nucleic acid and content of the specification in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The nRR7 and nRR7-1 proteins are useful in the identification of deventeram target gentled in the regulation of in vivo activity. The nuclear receptor is involved in the regulation of in vivo cell proliferation and/or cell development. The nRR7 and nRR7-1 polynucleotides, expression vectors and host cells are useful for the

The nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment of various diseases.

```
cc polypeptide. Human VDRR polypeptides and substances which affect VDRR CC signal transduction, can be used for treating metabolic, proliferative crimical contractions. They can be used in the manufacture of a cc medicament for treating the following conditions: obesity, diabetes, cc ancrexia, lipoprotein defects, hyperlipidaemia, hypercholesterolaemia or cc hyperlipoprotein aemia and osteoporosis, rheumatoid arthritis, benign and cc malign tumours, hyperproliferative skin disorders or hyperthyroidism. CC Nucleic acid vectors encoding for expression of a VDRR polypeptide can be used for treating metabolic, proliferative or inflammatory conditions, cc by introducing them into a mammal. The introduced nucleic acid is then capable of transforming a cell in vivo and then polypeptide is expressed. CC antagonist can be used for the manufacture of a medicament for treating metabolic, proliferative or inflammatory condition. CC antagonist can be used for the manufacture of a medicament for treating cetabolic, proliferative or inflammatory condition. CC N.B. The specification specifically claims the VDRR nucleic acid and CC polypeptide sequences given in figures 1, 4, 7 and 8, but no figures care given in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ωy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g

The nNR7 and nNR7-1 proteins are useful in the identification of downstream target genes and ligands regulating its activity. The nuclear receptor is involved in the regulation of in vivo cell proliferation and/or cell development. The nNR7 and nNR7-1 polynucleotides, expression vectors and host cells are useful for the recombinant production of the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 1999-405024/34

The hPXR is used to identify: its specific modulators, and compounds that induce CYP3A4 expression (i.e. to identify drug interactions, since CYP3A4 is involved in many biotransformations of drugs). The modulators are potentially useful for: associating particular diseases and conditions with PXR and for treating such conditions. Antibodies raised against hPXR can be used for determination and purification of hPXR. The present sequence represents a DNA encoding the

CC The invention relates to a novel nuclear receptor polypeptide, designated CC SXR (steroid and xenobiotic receptor). SXR (i) forms a heteroid mer with CC retinoid X receptor (RXR), (ii) binds to a direct or inverted repeat CC response element motif based on the half-site AGTTCA, (iii) activates CC transcription through response elements present in steroid-inducible P450 CC genes, in response to a wide variety of natural and synthetic steroid commones and (iv) is prominently expressed in liver and intestine. SXR CC regulates expression of catabolic enzymes, in response to many different controls, and thus affects metabolism. SXR is a broad specificity, low-cc affinity receptor for reducing excessive levels of steroids in the CC circulation. (Ant)agonists of SXR are used to regulate metabolism of catabolism of steroids particularly phytoestrogens or calcium-channel blockers, to reduce steroid toxicity in subjects being treated with steroids, e.g. in CC steroids particularly phytoestrogens or calcium-channel blockers, e.g. in CC cases of tuberculosis (treated with tamoxifen, raloxifen etc.) or osteoporosis (treated with vitamin K), or to-slow metabolism of therapeutic steroids. Also, modulating endogenous SXR is used to treat disease, particularly an agonist is used where endogenous steroid levels are excessive (e.g. CC cushing syndrome; virilism and hirsutism in women; polycystic ovarian CC dehydrogenase deficiency, or breast, colorectal or prostatic cancer), while antagonists are used where endogenous steroid levels are too low. CC clus that express SXR are used to identify compounds likely to be converted. The present sequence represents the longest SXR cDNA clone concerns the longest SXR cDNA clone encoding the SXR balverbulled.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 10; Fig 1A; 83pp; English.
                                                         encoding the SXR polypeptide.

The nucleic acid sequence was isolated from a human adult collibrary using a swellfish ANO23 derived probe. The protein be used for the development of drugs and diagnosis and trea of various diseases.
                                                                                                                                                                                                                                                                                                                                                                              New intranuclear receptor protein - useful diagnosis and treatment of disease

The nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of druys and diagnosis and treatment of various diseases.

The coding sequence is incorporated into a recombinant baculovirus vector for transformation of the insect host. The rat version of the coding sequence was published in Burmester et al., Proc.Natl. Acad.Sci USA 85;9499-9502 (1988).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotides which encode novel isoforms of the human vitamin D receptor (VDR) or variant transcripts for hVDR. The polynucleotides are useful in methods for detecting agonist and for antagonist compound of a VDR isoform. An increase or decrease in activity of the receptor may be detected by measuring changes in interactions with known cofactors (e.g. SRC-1, GRIP-1 and TRIIB) or unknown cofactors (e.g. through use of the dual hybrid system). The polynucleotides shown in x34787, x34791 and x34792 (corresponding to hVDR exon sequences) may be useful as probes for the detection of VDR variant transcripts and for assessing cell or tissue-specific expression of variant transcripts. The present sequence represents the nucleotide sequence of hVDR gene transcript 9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Crofts LA,
